TECHNOLOGY CENTER 2100

*Continuation Sheet (PTOL-303) 09/750,046

Continuation of 10. Other: Examiner respectfully disagrees with applicant's interpretation of Kitayama, and how it is being applied to the current application by the examiner. The applicant contends that Kitayama does not disclose a gateway server, as the server does not intercept all communications output by various devices. An art accepted definition of gateway server is a server which communicates with a separate network, utilizing multiple protocols to achieve connection. A gateway server does not need to be the first server a device communicates with, and as stated in the Remarks section, the web server of Kitayama communicates with the Internet connecting the individual devices. Additionally, the applicant states that Kitayama does not convert information based on individual terminal attributes (Remarks, Page 8 lines 4-9), then on lines 11-12 says that Kitayama converts based on "information about terminal attributes". The examiner believes the information taken from the database is terminal attribute information, this information is what is used to convert the view objects. Lastly, the applicant contends that Kitayama does not treat picture data differently than non-picture data. In Kitayama, the HTML generator creates view objects from a group of data objects and image objects. Paragraph [0075] discusses the encoding of the objects, generating child view objects from the view objects, or as applied to this application, a second content type, and generating the data objects into child data objects, which are not the same as the second content type. As claimed, the limitation merely states that non-picture content is not converted into second contents (or in this case, converted view content). It does not state the non-picture contents are not converted at all..
